ABOUT ME

Looking for a long-term contract for website maintenance and development. I've been working with WordPress for 6 years. For most of that time, I focused on support: customizing existing themes and plugins, fixing bugs, and adding new features. For the past couple of years, I've been delivering turnkey projects - not just basic layout work, but full-featured websites with calculators, product catalogs. When I need to quickly handle routine tasks, I use AI, but I always double-check the results myself.

EXPERIENCE

sea-man.org - WordPress Developer (*remote, long-term collaboration*)

2019 - 2026

- Maintained and developed an educational website for sailors. I wrote a testing system (CES, Delta, CBT) in JavaScript - the code was far from perfect, but it ran reliably and attracted many visitors, with organic traffic increasing by about 80%.
- Added monetization via WooCommerce with payment options through PayPal and cryptocurrency - and sales jumped to over 20 per month.
- Optimized the website: I set up caching and a CDN (Cloudflare), and improved the PageSpeed score to 95+.
- Trained three writers from scratch to use Wordpress and manage SEO.

crew.sea-man.org - WordPress Developer (*turnkey project*)

NOV 2025 - MAR 2026

- Built a platform for hiring seafarers: registration, user profiles, resumes, job listings, and AJAX filters. I generated most of the code using AI tools (vibe coding), then refined and debugged it manually.
- Set up a Telegram bot to automatically post job openings in the group.
- Integrated AI bot powered by Gemini: users enter a query, the bot analyzes all job listings, and returns relevant results.

ulianovauto.ru - WordPress Developer (*turnkey project*)

JUN 2025 - AUG 2025

- Built a website from scratch for a car import company. The main feature is a customs duty calculator that takes into account the engine type, age, displacement, and price of the vehicle. Thanks to the calculator, visitors started submitting inquiries more often because they could see the price right away.
- Added a vehicle catalog with filters, an admin panel for order processing, an SEO blog, an FAQ section, and an interactive map of partners. Implemented a light/dark theme toggle.
- The company didn't have a website before - I created a centralized point of entry for their customers.

SKILLS

Wordpress - custom themes, plugins, ACF, post types, WooCommerce, WP_Query, hooks.

JavaScript - proficient, jQuery, AJAX, some React.

PHP - reading and modifying existing code, procedural style, basic hooks.

Integrations - Telegram Bot API, Gemini API, third-party APIs.

Speed optimization - PageSpeed Insights, Core Web Vitals, Cloudflare (CDN, caching).

... and of course HTML5, CSS3, Tailwind CSS, responsive web design.

ADDITIONALLY

- I'm good at figuring out other people's code and projects, especially if they're outdated or poorly written.
- I'm comfortable with routine tasks: support, bug fixes, and updates.
- English (B1): I read technical documentation, can correspond via email, and am slowly learning conversational English.
- Russian is my native language.

PORTFOLIO
